Created git commit.

Success! Created myfirstreact at C:\Users\jelan\myfirstreact
Inside that directory, you can run several commands:

  npm start
    Starts the development server.

  npm run build
    Bundles the app into static files for production.

  npm test
```

```
npm test
  Starts the test runner.

npm run eject
  Removes this tool and copies build dependencies, configuration files
  and scripts into the app directory. If you do this, you can't go back!
```

We suggest that you begin by typing:

```
cd myfirstreact
npm start
```

Happy hacking!

The screenshot shows the Visual Studio Code editor interface. The Explorer panel on the left displays the file structure of a project named 'myfirstreact'. The file tree includes a '.dist' directory, 'node_modules', a 'public' directory with assets like 'favicon.ico', 'index.html', 'logo192.png', 'logo512.png', 'manifest.json', and 'robots.txt', a 'src' directory with files like 'App.css', 'App.js', 'App.test.js', 'index.css', 'index.js', 'logo.svg', 'reportWebVitals.js', and 'setupTests.js', and a '.gitignore' file. The main editor area shows the 'App.js' file with the following code:

```
1 function App() {
2   return (
3     <div style={{ textAlign: "center", marginTop: "20px" }}>
4       <h1>Welcome to the first session of React</h1>
5     </div>
6   );
7 }
8
9 export default App;
```

The bottom panel of the editor shows the 'TERMINAL' tab with the command prompt 'PS C:\Users\jelan\OneDrive\DN-Java-FSE-Solutions\week 5\1>'. A 'C Comp...' dropdown menu is open, showing options like 'powershell' and 'C Compiler...'. A 'Tip' box on the right suggests using the 'Plan agent' to research and plan before implementing changes.

Windows taskbar at the bottom shows the search bar, taskbar icons, and system tray with the time 5:46 PM on 7/19/2026.

```
Windows PowerShell
Compiled successfully!

You can now view myfirstreact in the browser.

Local:      http://localhost:3000
On Your Network:  http://192.168.0.221:3000

Note that the development build is not optimized.
To create a production build, use npm run build.

webpack compiled successfully
```
